Qualified Lync applications

Microsoft Lync empowers organizations by bringing the power of software to communications. It integrates telephony, voice, web conferencing, presence, and instant messaging into one seamless experience. Microsoft partners extend the Lync software platform with applications that meet an expanding variety of business and communications needs.

Announcement: The Lync 2013 Qualification Program is now officially closed! At the present time there is no Skype for Business Qualification Program for Independent Software Vendors.

Note: If the lack of the Skype for Business Qualification Program critically impacts your business, please contact us at S4BISV@microsoft.com.

Qualification program overview

- Program participation
- All applications [108]
- Qualified for Lync 2010 [28]
- Qualified for Lync 2013 [63]
- Attendant console [9]

- Contact center [22]
- Lync extensibility [2]
- Persistent chat [2]
- Recording [11]
- Software defined networking [6]
- Validated applications [42]
- Related resources

Lync ISV qualification program overview

The Lync ISV qualification program is designed to help ensure that qualified applications meet customer expectations for specific scenarios.

With third-party testing, the program defines specific requirements for interoperability with Lync Server, installation, set-up and configuration, documentation, and support.

Designed with enterprise-class industry standards, testing covers performance, reliability, and SDK/API utilization.

Mitigate risk, enhance customer satisfaction and ensure legislative compliance.

redboxrecorders.com

☐ Description

A user-friendly and intuitive voice and data recording software solution that is suitable for companies and organizations of all sizes. It can be tailored to meet precise customer requirements with a wide range of functionality including quality management, PCI compliance, call management and billing, event reconstruction and audio analytics.

The Red Box Quantify recording solution can record any required internal Lync audio conversation, external Lync audio conversation or Lync Messaging which helps organizations to gain competitive advantage by delivering a wide range of business and operational benefits, increasing productivity, and reducing costs.

Software defined networking applications

Applications built on the Lync SDN API provide the ability to quickly detect quality affecting issues on the network and deliver prescriptive resolutions and traffic prioritization. Manage the Lync experience with automated root-cause analysis of network issues. Access real time, session-level metrics for network events across modalities, sessions, and IP topology layers.

Registration for the Lync SDN API Developer Program on the [Microsoft Connect web site](#) and use invitation ID: **LSA-T882-JJYX**. Finished applications are submitted for third party testing and then included here.

Developers can download the [Lync SDN API](#) from the Microsoft Download Center.
